PROFILE

Full-Stack Developer with 3+ years of experience building scalable web applications across healthcare, fintech, and social platforms. Specialized in TypeScript, Node.js, and modern backend architectures with proven expertise in API development, database optimization, and secure authentication systems. Experienced in implementing role-based access controls, and architecting backend infrastructure for SaaS platforms. Adept at working in Agile remote teams with strong emphasis on clean code, developer productivity, and solving real-world problems through full-cycle product development.

EDUCATION

B.Tech, Computer Science **Sept. 2018 – May 2024**
Federal University of Technology, Owerri

EXPERIENCE

Backend Developer, Speirah, Nigeria **Oct. 2025 – Present**

- Led backend architecture for HIPAA-compliant healthcare platform managing patient exercise routines, clinician dashboards, and predictive health analytics using TypeScript and Next.js.
- Built RESTful APIs powering multi-role access for patients, clinicians, parents, and administrators with secure authentication flows using JWT with refresh token rotation and role-based access control.
- Optimized PostgreSQL database queries and implemented caching strategies with Redis to handle concurrent user loads efficiently while maintaining strict data privacy standards

Backend Developer, HNG Tech, Nigeria **Sept. 2023 – Oct. 2023**

- Built Customer Purchase Dashboard processing high-volume daily transactions with reliable uptime, enabling real-time business insights and eliminating manual data compilation workflows.
- Optimized PostgreSQL database performance through strategic indexing and schema redesign, significantly reducing query response times and improving overall user experience.
- Developed automated data aggregation pipeline that streamlined reporting processes, freeing up substantial time for strategic analysis and decision-making..

Backend Developer, Genesys Tech Hub, Nigeria **Nov. 2022 – July 2023**

- Led backend architecture for LMS platform and PostIt social platform, implementing microservices pattern that improved system scalability and reduced deployment complexity.
- Enhanced API response times through comprehensive database optimization and caching strategies, resulting in improved user engagement and reduced infrastructure costs.
- Elevated team productivity through implementation of code review standards, automated testing protocols, and regular knowledge sharing sessions, accelerating feature delivery cycles.

Backend Developer, Side Hustle, Nigeria **Aug. 2022 – Oct 2022**

- Developed secure authentication system with JWT, Bcrypt, and role-based access control supporting multiple permission levels with zero security breaches

SKILLS

Languages: TypeScript, JavaScript, SQL
Backend: Node.js, Nest.js, PostgreSQL, MongoDB, Redis
Frontend: React, Next.js
Tools: Git, GitHub, Docker, CI/CD, Jest, Supertest
Concepts: HIPAA Compliance; JWT Authentication; Role-Based Access Control; Database Optimization; API Design; Agile Development

CERTIFICATIONS

Backend Developer Certification, Genesys Tech Hub **July. 2023**
